

specimen of *Phoca Grælandica* was killed in 1830, but is supposed to have fallen overboard from one of the returning Greenland ships. Of *P. annellata* and *leporina* he states, "I am much inclined to suspect that further observations will prove them to be merely varieties of the *vitulina*." A specimen of the Walrus was killed near the island of Fetlar in the summer of 1815, and another was seen in 1828 for a few days in Balta Sound. In this paper a great deal will be found to interest relative to the manners and habits of the Shetland seals, and Dr. Edmonstone would be conferring a favour on zoologists if he could send the skins and skeletons of the most marked varieties either to Edinburgh or London, where they could be compared with other species, and any disputed points finally settled.

II. "On the last changes in the Relative Levels of the Land and Sea in the British Islands." By James Smith, Esq., of Jordan Hill. A paper of much local interest, and illustrated by two plates of new recent shells from the firth of Clyde.

III. "On the *Asteriadæ* of the Irish Sea." By Edward Forbes, Esq.

IV. "Meteorological Journal for the year 1838, kept at the Manse of the parish of Abbey of St. Bathons, Berwickshire." By the Rev. John Wollow.

V. "On the Geognosy of the Isle of Eigg." By R. J. Hay Cunningham, Esq.

*Scandnaviens Fiskar*, målade of W. v. Wright, med text of B. Fries och C. U. Eckström. 4 et 5 Häftet. Stockholm.

The fourth part of this excellent work contains splendid drawings of *Gadus Æglefinus*, *Pollachius*; *Raniceps niger* (with text), *Callionymus Lyra* ♂ and ♀, *C. maculatus*, besides descriptions of *Cyprinus Grislagine*, *rutilus*, *erythrophthalmus*, *Gadus minutus* and *merlangus*. The fifth part contains drawings of *Centronotus gunellus*, *Clinus maculatus*, Fries; *Cyprinus Ballerus*, *Pleuronectes Limandoides*, *Myxine glutinosa*, *Scomber scombrus*, and *Squalus cornubicus*. From the accuracy of the drawings, and the completeness of the descriptions, this work will always remain the most important source for the determination of those species established by Linnæus and the Swedish naturalists.

*Verzeichniss der Conchylien in der Sammlung von E. Anton*. Halle. This Catalogue contains 3410 species, of which 348 are new, and are here described.
